Information Processing broke out to a new height when *Quick Modules*, an information and imaging system incorporating unparalleled productivity, accuracy, configuration flexibility and economy was introduced by Fairfax Imaging, Inc.

After more than 20 years, *Quick Modules* stands as the system of choice for numerous Fortune 500 companies and government agencies. *Quick Modules* systems successfully process billions of transactions with data captured from documents, checks, electronic files, fax messages and several other inbound content types within mail order pharmacy fulfillment, order/donations processing, tax/labor departments, accounts payable, license and tag renewal processing and remittance operations.

The system's ability to process structured as well as unstructured forms, electronic transactions and other forms of input data all within a common and singular workflow separates *Quick Modules* from any other available product.

Fairfax Imaging staff includes information processing specialists. With Fairfax Imaging, the journey to a successful operation begins with the belief that **the key to a successful installation is not knowing how to do things right, but in knowing the right things to do.**

As a single provider of the solution, Fairfax Imaging supports its client base with a determined responsiveness focused on client needs which ensures high availability of the system.

As the name infers, *Quick Modules* is a modular system. What distinguishes it from other systems are the endless ways the modules can be hinged to create unique configurations to meet client needs.

Change is inevitable! Budget constraints, new business requirements, legal requirements and new product introductions are but some of the events that force change. With *Quick Modules*, growing or changing is as simple as adding or reconfiguring system modules because **a *Quick Modules* configuration, while rock solid, is never rigid.**

For years, clients have been seeking an economical yet effective way to convert from a legacy process to a more automated means using digital imaging. Hardware and software costs, along with the need for existing database interoperability, have proven to be major obstacles.

Quick Modules removes these obstacles because it accommodates virtually every modern scanner, transport and database. From the smallest operation to the most massive demand, ***Quick Modules* has stood the test of time and has been proven to eliminate the concern of conversion and the cap on capacity.**

There's more. ***Quick Modules* is expansive.** Remote capture and automatic bank depositing is a choice feature of the system. Access to data and applications via Web browser is a functional feature of the system's thin client architecture.

***Quick Modules* is powerful.** No presorting required. The content's incoming mail (forms, correspondence,

checks, etc.) are identified when they are received. Data is accurately classified and captured from both, regardless of the order it entered the workflow.

***Quick Modules* is comprehensive.** Batches of mixed sized documents with a MICR, OCR/ICR, OMR, barcodes (1D/2D, postal), with, or without scan lines are accepted. Checks are CAR/LAR compared to assure high capture rates. *Quick Modules* performs full color scan to properly handle dark color paper, safety paper and complex background paper. Two sided scanning with image quality detection is also accommodated.

***Quick Modules* is easy to integrate.** Integration with legacy systems through Web services, database interaction, and table lookups are performed. Output can be appended and stored in ODBC databases or exported in XML files. Reports, both standard and custom, are easily facilitated within the system using a common report engine.

Competent, reliable maintenance is a Fairfax Imaging hallmark. The online Fairfax Account Support Tool – FAST – enables immediate notification and tracking of status for problem reports, change requests, and consumable purchases. There's no voice mail uncertainty, or hold button frustration. It only takes a click of the mouse to get our attention.

We invite you to join the Fairfax Imaging *Quick Modules* break out. We look forward to hearing your break out plans.

Fairfax Imaging *Quick Modules* One Solution • One Workflow • One Provider

- *Quick Modules* is database driven from the ground up and is compatible with any ODBC compliant database.
- A multi-tier architecture provides a secure environment for housing and storing images and data.
- Complete system auditing capability provides information on who touched what and when for reporting.
- Batch and transaction processing maximizes the efficiency of operation to meet virtually any processing mode the client desires.
- Comprehensive configuration tools support client maintenance of the system and operation of the system economically while optimizing the workflow.
- Thin client user interfaces reduce overall system footprint and allow easy roll-out of system changes, updates, and on-going support.
- Complete system reporting and monitoring tools provide performance and statistical information, as well as real time feedback and alerts of system operation.
- Expandable to accommodate the smallest to the largest user so as to address future needs as they arise.
