

Fairfax Imaging, Inc. Wins Award From The City of Philadelphia

Tampa, FL, December 10, 2013 -- The City of Philadelphia Department of Revenue has selected Fairfax Imaging, Inc. as its provider of a municipal payment processing system, including mail payment processing, cashiering and Check 21 for electronic deposits. This single provider solution from Fairfax will capture all payment types received by the Revenue Department including those received by mail and over the counter at 3 revenue offices around the city. This integrated solution includes our industry-leading *Quick* Modules software for mail payments and ACTIVE Network's cashiering software for over-the-counter payments. These highly successful and award winning solutions are currently processing billions of dollars and millions of transactions per day, across many industries both government and commercial and offer the City a "best of breed" integrated payment processing solution.

The Fairfax solution will process 18 tax types including Business, Sales and Use, Liquor and Real Estate. Current industry best practices are included in the solution with combined mail opening, extracting and scanning, barcode recognition, and integrated exception handling.

Another improvement is the combining of mail opening, extraction and scanning on the OPEX AS7200i document capture platform. This single touch approach will streamline the current mail room process by eliminate multiple steps for capturing payments and reduce the need to physically sort forms which will significantly reduce document preparation time.

In order to reduce the time to deposit tax payments into the City bank accounts, Fairfax is implementing our Check21 module which will eliminate the current manual deposit process. Our integrated solution will provide one deposit stream for all payments, from both the Cashiering and Remittance systems.

Quick Modules will also provide historical end of day reporting. *Quick* Reports can, and will, be easily configured to accommodate custom report types generated by Fairfax Imaging or by the City.

From mail room to mainframe, the system provides a robust set of tools for real-time monitoring and feedback of solution statistics to City operators and supervisors. This flexible system workflow combines unattended server tasks along with operator tasks within a common architecture designed specifically for tax and revenue processing

"We are pleased to provide to the City of Philadelphia a comprehensive solution, using *Quick* Modules as the basis for the replacement for an outdated system. Bringing immediate success to their operation is our goal and we are confident that by using our existing solution coupled with ACTIVE Networks' cashiering solution, we will achieve that goal," stated Michael Minter, VP of Sales & Marketing at Fairfax Imaging. "In addition, the system is designed to be expanded to assist other City agencies in the future if needed, thus creating an on-going important project for us."

About ACTIVE Network

ACTIVE Network is the leading provider of Activity and Participant Management™ solutions. Our technology platform makes managing and operating all types of activities, events and organizations smarter and more efficient. We power over 55,000 global customers and build leading vertical technology applications for the markets we serve. Our leading ACTIVE Works cloud platform scales with our customers, large and small.
